

# ~Sebatron~

Innovative Australian Audio

## VMP Series :

The VMP Series of microphone preamplifiers from ~Sebatron~ are based on a new and unique preamp design. The circuit is totally Class A throughout, ensuring the signal is kept intact and pure, from input transformer to valve to solid state output buffer.

Totally Discrete Class A output buffer stage reacts quickly to transient detail with a wide bandwidth and minimum of colouration Pad switch controls the negative feedback in the first gain stage, changing preamp tone from pure and clean to dark and coloured Low Cut will remove unnecessary sub frequencies, or the Deep position will bring them out for fat, powerful bass

+48Vdc Phantom power supply, with silent switching on each channel and LED indication of status Bright and Air enhance progressively higher frequencies without adding noise 12AT7 vacuum tube driven from a high tension DC rail and DC filament.
